Final submission checklist

PROJECT AT A GLANCE

What SmartHire AI is, who uses it and what the supplied build contains

CANDIDATE

Resume intelligence, mock interviews, live interview, reports, performance analytics, practice assessments, career roadmap and notifications.

RECRUITER

Candidate management, candidate comparison, interview templates, jobs, AI analytics, interview activity and reports.

ADMIN

Platform performance, user management, recruiter operations, AI configuration, system health, reports and controls.

Supplied implementation inventory: the archive contains 16 page-level HTML files plus the landing page, 27 JavaScript files, 23 CSS files, 158 Java source files, 5 Python AI-service entry points, Docker Compose orchestration, CI configuration, SQL repair scripts, tests and implementation notes.

DOCUMENTATION TRUTH

Important documentation truth: the project itself describes real provider integrations and deterministic fallbacks. The custom CNN service is designed to refuse fabricated emotion predictions when its genuine three-class model is unavailable.

ARCHITECTURE & TECHNOLOGY

The system is layered so the UI, API, database and AI services can evolve independently

Docker Compose coordinates PostgreSQL + backend + frontend + 5 AI services. Request flow: the browser presents role-specific screens → shared JavaScript calls the Spring Boot REST API → backend services authenticate/authorize the

Layer	Technologies / project evidence	Purpose
Frontend	HTML5 • CSS3 • Vanilla JavaScript • responsive themed UI	Role dashboards, interview UI, analytics and reports
Backend	Spring Boot 3.5,4 • Spring Web • JPA • Security • OAuth2 • AOP	REST APIs, business logic, auth, persistence and metrics
Database	PostgreSQL 16 in Docker; PostgreSQL-compatible JPA mapping	Users, resumes, interviews, evaluations, notifications and platform data
Generative AI	Google Gemini integration (configured model: gemini-3.6-flash)	Question generation, interview evaluation, career roadmap, resume analysis
AI microservices	Whisper • DeepFace • MediaPipe • YOLO object detection • custom Speech	Speech/transcription, emotion, eye tracking, prohibited-object signals, custom e
Deployment	Dockerfile • Docker Compose • Render manifest • GitHub Actions CI	Repeatable local/container deployment and automated build/test/package

PROJECT STRUCTURE

Where the important pieces live

01

index.html

Landing/auth entry and product introduction.

02

pages/

Candidate, recruiter, admin, setup, live interview, resume, reports, analytics, settings and supporting screens.

03

css/

23 theme/component stylesheets including candidate, recruiter, admin, live interview, proctoring, analytics and unified theme layers.

04

js/

27 scripts including auth, API client, candidate/recruiter/admin dashboards, interview setup, live monitoring, proctoring, analytics and notifications.

05

smarthire-backend/src/main/java/...

Spring Boot domain packages for auth, AI, interviews, resume, recruiter, admin, analytics, platform and notifications.

06

smarthire-backend/src/main/resources/

Runtime properties and schema repair SQL.

07

ai-services/

Five Python services: Whisper, DeepFace, MediaPipe, object detection and custom emotion CNN.

08

docker-compose.yml

Runs PostgreSQL, backend, frontend and the five AI services as a coordinated stack.

09

.github/workflows/ci.yml

Continuous integration workflow for build/test/package validation.

db / *.sql

INSTALLATION & CONFIGURATION

Practical local setup based on the supplied project instructions

PREREQUISITES

- Java 21 (the backend pom.xml sets java.version to 21).
- Maven 3.9+ or the supplied Maven wrapper (mvnw / mvnw.cmd).
- PostgreSQL 14+ for a non-Docker setup; Docker Compose can provision PostgreSQL 16.
- A modern Chromium-based browser for camera/microphone and

BACKEND — LOCAL

```
cd smarthire-backend
```

```
mvn clean package
```

```
mvn spring-boot:run
```

The backend listens on port 8080. Configure datasource credentials and secrets through environment variables or local configuration. The project

FRONTEND + DOCKER COMPOSE

Frontend — local: Serve the repository root using a static server (for example VS Code Live Server) and open index.html. The default local CORS configuration expects common Live Server origins such as localhost:5500.

```
docker compose up --build
```

Compose exposes frontend on 5173, backend on 8080, PostgreSQL on 5432, and the AI services on 8091-8095.

KEY CONFIGURATION GROUPS

- SPRING_DATASOURCE_* — PostgreSQL connection.
- GEMINI_API_KEY / GEMINI_MODEL — generative AI integration.
- APP_JWT_SECRET / APP_JWT_EXPIRATION_MS — authentication token configuration.
- AI_*_URL and AI_*_ENABLED — AI microservice routing.
- MAIL_* — optional SMTP report email delivery.
- S3_* / RECORDING_STORAGE_PROVIDER — optional persistent recording storage.
- ADMIN_* — optional first-start admin bootstrap configuration.

1

Sign in / register

Use the authentication entry screen and enter the Candidate experience.

2

Complete profile & preferences

Open Settings to configure interview, notification, privacy/device and accessibility preferences.

3

Upload and analyze resume

Open Resume Analyzer, select a PDF, extract text, inspect skills and ATS/improvement signals.

4

Prepare

Use Practice Assessment for coding/aptitude and Improvement Progress for the growth journey.

5

Start interview

Open Interview Setup, select the interview context and complete the quick device check.

6

Complete live interview

Use webcam/mic, answer questions, follow the question journey and submit responses.

7

Review outcome

Open Interview Report, Performance Analytics and Interview History to understand scores, transcript, signals and recommendations.

8

Act on recommendations

Use weak-area signals, practice recommendations, career roadmap and notifications to continue improving.

1

Open recruiter dashboard

Start from the hiring workspace and review candidate counts, hiring brief and interview activity.

2

Manage candidates

Open candidate management, candidate detail and comparison views to review evidence.

3

Create interview templates

Use Interview Templates to standardize recurring interview structures.

4

Manage jobs

Use Job Management for recruiter-side job posting CRUD workflows.

5

Inspect analytics

Use AI Interview Analytics and skill-wise analytics to understand pool performance and weak skills.

6

Review reports

Open Latest Interview Reports / Recruiter Reports for stored evaluation evidence.

7

Make evidence-driven decisions

Combine interview scores, ATS signals, skill gaps and candidate detail evidence rather than using a single metric.

1

Open control center

Use the Admin dashboard as the governance starting point.

2

Monitor performance

Review Platform Performance and System Health for service/platform indicators.

3

Manage users

Use User Management for protected account and role operations.

4

Manage recruiter operations

Inspect recruiter-side operations and platform actions from the admin workspace.

5

Review AI configuration

Use AI Configuration Center to understand service state/configuration surfaces.

6

Inspect reports/activity

Use Platform Reports and Recent Activity for operational traceability.

7

Use system controls carefully

Administrative actions are role-protected and should be applied only when required.

AI SERVICES, MODULE 6 & PROCTORING

Gemini

Generative interview/question and evaluation flows; resume analysis and career roadmap clients are present in the Spring Boot backend.

Whisper

Speech transcription service exposed on port 8091; backend speech analysis can consume transcription results.

DeepFace

Emotion-analysis service exposed on port 8092 for live monitoring architecture.

MediaPipe

Eye-tracking service exposed on port 8093; the project also documents an OpenCV fallback path.

YOLO object detection

Optional camera-visible prohibited-object detection service on port 8094.

Custom CNN

Module 6 three-class model path on port 8095: Nervous, Scared, Confused. Architecture: Conv2D → ReLU → MaxPooling repeated three times → Flatten → Dense → Softmax.

MODULE 6 SAFETY / ACCURACY DESIGN

The supplied CNN documentation states that the service loads `emotion_cnn.keras` only when it exists. Without a genuine three-class model, the service reports degraded/model-not-ready behavior instead of fabricating predictions.

PROCTORING ARCHITECTURE

How live-session safeguards are organized

Proctoring architecture: the project documents browser proctoring, persistent violations, attention/engagement aggregation, a three-warning auto-submission policy and optional object detection. These mechanisms are implemented across the live-interview frontend, proctoring backend and AI-service integration packages.

LIVE INTERVIEW SAFETY LOOP

Camera + microphone → session monitoring → signals / violations → warning policy → session outcome. The documentation keeps provider/service concerns separate from the live-interview experience.

The evidence loop after the interview

MODULE 7 — AI SCORING & FEEDBACK

The backend contains interview evaluation clients, a scoring/feedback engine and structured evaluation responses. The report UI surfaces the resulting dimensions and recommendations.

MODULE 8 — DASHBOARD & ANALYTICS

Candidate analytics cover completed/evaluated interview counts, weighted overall scores, communication/confidence/technical/professionalism/problem-solving averages, improvement deltas, trends, weak areas, resume skill signals and AI recommendations. Recruiter analytics aggregate hiring-pool performance, ranking, skill analytics and trends. Admin analytics cover evaluation coverage, AI success rate and average evaluation dimensions.

MODULE 9 — NOTIFICATIONS & REPORTS

The notification center covers resume analysis available, interview started/completed, evaluation completed, report ready and recording available events. Report history, detailed report navigation, analytics PDF download and email-report architecture are implemented.

RECORDING

The project includes local recording storage plus an S3-compatible storage service abstraction for future/production deployment. Authorized API access is used rather than serving recording files publicly.

API & SECURITY REFERENCE

SEC

PROTECTION MODEL

Security: Spring Security, JWT authentication and optional Google OAuth2 are present. Role guards and protected controllers separate Candidate, Recruiter and Admin capabilities.

DEPLOYMENT RULES

- Runtime secrets are intended to be supplied through environment variables in deployment.
- Production CORS should be restricted to trusted origins.
- Role-protected controllers separate Candidate, Recruiter and Admin capabilities.
- Use protected API access rather than serving recording files publicly.

Common checks before presenting or deploying the project

Backend does not start

Confirm Java/Maven versions, PostgreSQL credentials, port 8080 availability and required environment variables.

Database schema error

The project includes idempotent SQL repair scripts for evolving interview/proctoring schemas. Apply the relevant repair script once to an older local database, then restart.

AI service unavailable

Check the corresponding localhost port 8091–8095 or Docker service health. The backend has provider/fallback architecture so some flows can remain available when optional providers are down.

Camera/microphone blocked

Allow browser permissions, use a modern Chromium-based browser and avoid insecure contexts that prevent MediaRecorder/device APIs.

Gemini responses unavailable

Verify GEMINI_API_KEY and model configuration. The interview flow documents database fallback behavior for question generation during outages.

Recording persistence

Local storage is suitable for development; production should use durable storage such as the configured S3-compatible provider.

CORS issue

Set APP_CORS_ALLOWED_ORIGINS explicitly for the deployed frontend origin.

Before submission

Run backend tests, validate HTML local asset references, validate Python AI services, confirm Docker Compose YAML, and test the key Candidate/Recruiter/Admin flows.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

01 • Recruiter • Latest Interview Reports

Source image: 01_recruiter-latest-interview-reports.png • original size: 1918 × 940 px • presented once in this manual

The screenshot displays the SmartHire AI Recruiter Dashboard. The left sidebar contains navigation links: Dashboard, Candidates (15), Interviews (100), Job Posts, Smart Recruiting Pro (AI ranking, interview insights and faster candidate decisions), Candidate Workspace, and Admin Workspace. The main content area is titled 'Latest Interview Reports' and shows a list of interview outcomes. Each row includes the candidate name, role, date and time, a progress indicator (e.g., 50%, 37%, 35%, 55%, 18%, 45%, 28%), and a 'View Report' button. The status 'Recording stored' is also present for each report. The bottom of the image shows a Windows taskbar with various application icons and the system clock indicating 8:29 PM on 9/14/2026.

Candidate Name	Role	Date & Time	Progress	Status	Action
Test User	Frontend Developer • technical	9/14/2026, 7:14:10 PM	50%	Recording stored	View Report
Test User	Frontend Developer • technical	9/14/2026, 6:29:52 PM	37%	Recording stored	View Report
RAMU	Frontend Developer • technical	9/13/2026, 8:52:21 PM	35%	Recording stored	View Report
surya	Frontend Developer • technical	9/13/2026, 6:55:36 PM	55%	Recording stored	View Report
surya	Frontend Developer • technical	9/12/2026, 9:43:07 PM	18%	Recording stored	View Report
surya	Frontend Developer • technical	9/5/2026, 1:31:32 PM	45%	Recording stored	View Report
surya	Frontend Developer • technical	9/5/2026, 1:15:29 PM	28%	Recording stored	View Report

WHAT THIS PAGE IS

A recruiter-facing report list that brings completed interview evidence into one review surface.

HOW TO USE IT

Use this page to scan candidate interview outcomes, compare report status, and open the detailed evidence for hiring decisions.

PROJECT / TECH MAPPING

Maps to recruiter report-center UI and the interview/report APIs; report history is persisted by the Spring Boot backend.

30 unique screens • one screen per page • description immediately below the exact screenshot

02 • Recruiter • Interview Templates

Source image: 02_recruiter-interview-templates.png • original size: 1918 × 892 px • presented once in this manual

WHAT THIS PAGE IS

Template management workspace for creating reusable interview structures and keeping recruiter interviews consistent.

HOW TO USE IT

Create or maintain interview templates before launching candidate evaluations; use the action controls to manage reusable question structures.

PROJECT / TECH MAPPING

Backed by InterviewTemplateController, InterviewTemplate entity/repository/service and /api/recruiter/templates endpoints.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

03 • Recruiter • Hiring Workspace

Source image: 03_recruiter-dashboard-hiring-workspace.png • original size: 1915 × 925 px • presented once in this manual

WHAT THIS PAGE IS

Primary recruiter dashboard showing the hiring workspace, operational KPIs and candidate-facing actions.

HOW TO USE IT

Start from this dashboard to review the hiring pool, move into candidate management, analytics, jobs, templates or reports.

PROJECT / TECH MAPPING

Rendered by recruiter dashboard HTML/JS/CSS; analytics data is supplied by recruiter analytics services and REST endpoints.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

04 • Landing • AI Recruitment Platform

Source image: 04_landing-page-ai-powered-recruitment-platform.png • original size: 1918 × 891 px • presented once in this manual

WHAT THIS PAGE IS

Public entry experience introducing SmartHire AI as an AI-powered mock interview and candidate assessment platform.

HOW TO USE IT

Use the landing page to understand the product value proposition and select the appropriate SmartHire experience or authentication action.

PROJECT / TECH MAPPING

index.html plus landing-premium/final-polish styles and landing-enhancements.js form the presentation layer.

30 unique screens • one screen per page • description immediately below the exact screenshot

05 • Candidate • SmartHire Preferences

Source image: 05_candidate-smarthire-preferences.png • original size: 1915 × 933 px • presented once in this manual

WHAT THIS PAGE IS

Candidate settings page covering interview preferences, notifications, privacy/device controls and accessibility.

HOW TO USE IT

Review or change personal interview behavior, notification switches, device/privacy settings and accessibility options.

PROJECT / TECH MAPPING

settings.html and settings.js persist UI preferences; backend profile/notification endpoints support server-side state where applicable.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

06 • Recruiter • Candidate Comparison

Source image: 06_recruiter-candidate-comparison.png • original size: 1906 × 897 px • presented once in this manual

WHAT THIS PAGE IS

Side-by-side candidate intelligence surface for evidence-driven comparison during hiring.

HOW TO USE IT

Compare candidates using stored interview/ATS evidence rather than relying only on a single score; open details for deeper review.

PROJECT / TECH MAPPING

Uses recruiter candidate detail/comparison JavaScript and RecruiterService APIs, including candidate summaries and ranking signals.

30 unique screens • one screen per page • description immediately below the exact screenshot

07 • Candidate • Skill Practice

Source image: 07_candidate-skill-practice-assessment.png • original size: 1906 × 1041 px • presented once in this manual

WHAT THIS PAGE IS

Practice center for coding and aptitude preparation between mock interviews.

HOW TO USE IT

Choose a practice mode, answer the questions, submit the attempt and use recent results to decide what to practice next.

PROJECT / TECH MAPPING

practice-assessment.html + practice-assessment.js; assessment results are handled by candidate enhancement APIs.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

08 • Landing • Career & Hiring Intelligence

Source image: 08_career-hiring-intelligence-platform-overview.png • original size: 1918 x 873 px • presented once in this manual

WHAT THIS PAGE IS

A product overview screen that communicates the broader candidate-to-hiring intelligence workflow.

HOW TO USE IT

Use the overview to understand how resume intelligence, practice, interviews and hiring evidence connect into one platform.

PROJECT / TECH MAPPING

Landing content is implemented in index.html with shared theme CSS and landing-enhancement JavaScript.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

09 • Recruiter • Interview Activity

Source image: 09_recruiter-interview-activity.png • original size: 1918 × 843 px • presented once in this manual

Interview Schedule
Review interview activity stored in Smart-hire. [Open Interview Setup](#)

CANDIDATE	ROLE	DATE	TYPE	STATUS	ACTION
Test User	Frontend Developer	9/14/2026, 7:14:10 PM	technical	Completed	Review
super	Frontend Developer	9/14/2026, 6:38:38 PM	technical	In Progress	Review
Test User	Frontend Developer	9/14/2026, 6:29:52 PM	technical	Completed	Review
RAMU	Frontend Developer	9/13/2026, 8:52:21 PM	technical	Completed	Review
RAMU	Candidate	9/13/2026, 8:52:08 PM	technical	In Progress	Review

surya	Frontend Developer	9/13/2026, 11:43:42 AM	technical	In Progress	Review

WHAT THIS PAGE IS

Operational table of interview activity and statuses for the recruiter workspace.

HOW TO USE IT

Monitor recent interviews, status transitions and available actions; use it as the recruiter's operational queue.

PROJECT / TECH MAPPING

Driven by recruiter dashboard data and interview history/report APIs; UI state is handled in recruiter dashboard scripts.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

10 • Recruiter • Skill Analytics

Source image: 10_recruiter-skill-wise-analytics.png • original size: 1918 × 880 px • presented once in this manual

WHAT THIS PAGE IS

Skill-wise analytics view for understanding candidate strengths, gaps and hiring-pool trends.

HOW TO USE IT

Use dimension/skill signals to identify where candidates are strong and where targeted interview follow-up may be needed.

PROJECT / TECH MAPPING

Module 8 recruiter analytics aggregates interview dimensions, resume skill signals and chronological trends.

30 unique screens • one screen per page • description immediately below the exact screenshot

11 • Admin • Platform Dashboard

Source image: 11_admin-platform-dashboard.png • original size: 1899 × 916 px • presented once in this manual

WHAT THIS PAGE IS

Administrative overview of platform health, performance and operational metrics.

HOW TO USE IT

Use the admin home to monitor platform-level KPIs, reports, AI configuration, system health and administrative actions.

PROJECT / TECH MAPPING

admin.html + admin-dashboard.js; AdminActionController/AdminUserController and platform analytics supply backend data.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

12 • Landing • Candidate Experience

Source image: 12_landing-page-candidate-experience.png • original size: 1915 × 870 px • presented once in this manual

WHAT THIS PAGE IS

Candidate-oriented product panel highlighting practice, AI evaluation and platform control experiences.

HOW TO USE IT

Use this section to select the candidate journey and understand the main preparation/evaluation capabilities.

PROJECT / TECH MAPPING

Part of index.html landing experience; visual hierarchy is produced by the unified SmartHire theme and landing CSS layers.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

WHAT THIS PAGE IS

Administrative user-management table with account and role controls.

HOW TO USE IT

Search/review users, inspect account state and apply permitted administrative actions according to role.

PROJECT / TECH MAPPING

Uses AdminUserController, UserRepository and admin dashboard JavaScript; protected by Spring Security role authorization.

30 unique screens • one screen per page • description immediately below the exact screenshot

14 • Candidate • Dashboard

Source image: 14_candidate-dashboard.png • original size: 1918 × 907 px • presented once in this manual

WHAT THIS PAGE IS

Candidate home showing next interview, overall progress, recent interviews, resume health and practice priorities.

HOW TO USE IT

Use this as the daily starting point: launch a mock interview, review progress, inspect resume health and open reports.

PROJECT / TECH MAPPING

candidate.html +
candidate-dashboard.js +
candidate-analytics.js combine
dashboard data from interview,
resume and analytics APIs.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

15 • Candidate • History & Resume Analysis

Source image: 15_candidate-interview-history-resume-analysis.png • original size: 1914 × 867 px • presented once in this manual

WHAT THIS PAGE IS

Combined candidate evidence view linking interview history with resume/ATS intelligence.

HOW TO USE IT

Review previous interview outcomes alongside resume signals to understand how preparation and profile quality interact.

PROJECT / TECH MAPPING

Uses interview-history and resume-analysis services, with analytics and report navigation layered into the candidate experience.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

16 • Admin • Recruiter Operations

Source image: 16_admin-recruiter-operations.png • original size: 1918 × 883 px • presented once in this manual

WHAT THIS PAGE IS

Admin control surface for recruiter operations, hiring-pool management and operational actions.

HOW TO USE IT

Use the operational panels to inspect recruiter-side activity and apply platform-level controls when required.

PROJECT / TECH MAPPING

Combines admin and recruiter domain services; access is guarded by Spring Security and controller-level authorization.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

17 • Landing • Three SmartHire Experiences

Source image: 17_landing-page-three-smarthire-experiences.png • original size: 1918 x 877 px • presented once in this manual

WHAT THIS PAGE IS

Role-selection experience presenting Candidate, Recruiter and Admin paths.

HOW TO USE IT

Choose the role that matches your account and move into the corresponding workflow.

PROJECT / TECH MAPPING

Role routing is supported by auth.js, role-guard.js and the role-specific dashboard pages.

30 unique screens • one screen per page • description immediately below the exact screenshot

18 • Candidate • Interview Setup

Source image: 18_candidate-interview-setup.png • original size: 1914 × 951 px • presented once in this manual

WHAT THIS PAGE IS

Pre-interview setup screen where the candidate chooses interview context and prepares for the session.

HOW TO USE IT

Select interview type/context, review what happens next, complete the device check and enter the live session.

PROJECT / TECH MAPPING

interview-setup.html + interview-setup.js create the session entry flow and connect to /api/interviews/start and session APIs.

30 unique screens • one screen per page • description immediately below the exact screenshot

19 • Landing • Interactive AI Mock Interview

Source image: 19_landing-page-interactive-ai-mock-interview-demo.png • original size: 1918 × 877 px • presented once in this manual

WHAT THIS PAGE IS

Interactive marketing/demo section showing the AI mock interview experience and its feedback loop.

HOW TO USE IT

Use the demo section to understand the question → answer → evaluation cycle before starting a real practice session.

PROJECT / TECH MAPPING

Landing demo behavior is implemented in index.html and landing-enhancements.js without requiring the live interview backend.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

20 • Recruiter • AI Interview Analytics

Source image: 20_recruiter-ai-interview-analytics.png • original size: 1918 × 889 px • presented once in this manual

WHAT THIS PAGE IS

Recruiter analytics dashboard focused on AI-scored interview performance and candidate comparison signals.

HOW TO USE IT

Use analytics to identify strong candidates, weak dimensions and trends across the hiring pool.

PROJECT / TECH MAPPING

Module 8
RecruiterAnalyticsResponse and AnalyticsService provide aggregated metrics to the recruiter dashboard.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

21 • Candidate • Performance Dashboard

Source image: 21_candidate-performance-dashboard.png • original size: 1918 × 906 px • presented once in this manual

WHAT THIS PAGE IS

Detailed candidate performance screen showing skill breakdown, trends, weak areas and AI feedback.

HOW TO USE IT

Read the score dimensions, inspect weak areas and follow the recommended practice/improvement path.

PROJECT / TECH MAPPING

performance-analytics.html uses CandidateAnalyticsResponse and analytics/report APIs implemented in Module 8.

30 unique screens • one screen per page • description immediately below the exact screenshot

22 • Candidate • Interview History

Source image: 22_candidate-interview-history.png • original size: 1906 × 898 px • presented once in this manual

WHAT THIS PAGE IS

Chronological list of completed interviews with scores/statuses and navigation into evidence.

HOW TO USE IT

Open a completed interview to inspect its report, transcript, evaluation and signals; use history to track progress over time.

PROJECT / TECH MAPPING

interview-history.html connects to `/api/interviews/history/{userId}` and detailed interview report endpoints.

30 unique screens • one screen per page • description immediately below the exact screenshot

23 • Candidate • Interview Journey

Source image: 23_candidate-interview-journey.png • original size: 1918 × 897 px • presented once in this manual

WHAT THIS PAGE IS

Journey/timeline view that presents the lifecycle of the candidate's interview sessions.

HOW TO USE IT

Use the journey to understand what has been completed, what is next and which reports/actions are available.

PROJECT / TECH MAPPING

Built around InterviewSession and interview history/report APIs, with client-side journey rendering in candidate scripts.

30 unique screens • one screen per page • description immediately below the exact screenshot

24 • Admin • Platform Performance

Source image: 24_admin-platform-performance.png • original size: 1912 × 964 px • presented once in this manual

WHAT THIS PAGE IS

Admin analytics page focused on platform-wide performance and operational indicators.

HOW TO USE IT

Review evaluation coverage, AI success signals and platform-level score metrics for governance and monitoring.

PROJECT / TECH MAPPING

Module 8 admin analytics aggregates evaluation coverage, AI success rate and average evaluation dimensions.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

25 • Landing • Resume-to-Interview Journey

Source image: 25_landing-page-from-resume-to-interview-ready.png • original size: 1918 x 877 px • presented once in this manual

WHAT THIS PAGE IS

Product flow explaining how a resume becomes interview-ready evidence through analysis and preparation.

HOW TO USE IT

Follow the conceptual path: upload resume → extract → analyze → practice → interview → report.

PROJECT / TECH MAPPING

Corresponds to ResumeController, ResumeTextExtractionService, ResumeAnalysisService and candidate-facing resume UI.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

26 • Candidate • Interview Report

Source image: 26_candidate-interview-report.png • original size: 1918 × 846 px • presented once in this manual

WHAT THIS PAGE IS

Detailed report surface containing interview summary, recording metadata, scoring, transcript and advanced signals.

HOW TO USE IT

Review the complete outcome after an interview, including evaluation evidence, transcript and advanced live-session signals.

PROJECT / TECH MAPPING

interview-report.html maps to InterviewEvaluation, recording storage, report generation and advanced signal/proctoring services.

30 unique screens • one screen per page • description immediately below the exact screenshot

27 • Admin • System Health

Source image: 27_admin-system-health.png • original size: 1918 × 885 px • presented once in this manual

WHAT THIS PAGE IS

Administrative system-health panel showing service/platform status and operational controls.

HOW TO USE IT

Use this as a first diagnostic surface when AI services, platform integrations or runtime components need checking.

PROJECT / TECH MAPPING

Backed by health controllers and AI health/service status endpoints; Docker Compose defines the service topology.

30 unique screens • one screen per page • description immediately below the exact screenshot

28 • Candidate • Resume Skill Breakdown

Source image: 28_candidate-resume-skill-breakdown.png • original size: 1915 × 952 px • presented once in this manual

WHAT THIS PAGE IS

Resume intelligence screen visualizing extracted skills, technology signals and gaps.

HOW TO USE IT

Review extracted skills, identify missing skills and use the signals to improve the resume before interviewing.

PROJECT / TECH MAPPING

resume.html uses ResumeTextExtractionService and ResumeAnalysisService; ATS/skill signals feed the candidate analytics layer.

30 unique screens • one screen per page • description immediately below the exact screenshot

29 • Candidate • Resume Analysis Report

Source image: 29_candidate-resume-analysis-report.png • original size: 1912 × 889 px • presented once in this manual

WHAT THIS PAGE IS

Full resume analysis report presenting ATS score breakdown, strengths, weaknesses and improvement signals.

HOW TO USE IT

Read the ATS score, strengths, weaknesses and recommended improvements before using the resume for applications/interviews.

PROJECT / TECH MAPPING

Resume report generation is supported by ResumeReportService and protected resume report endpoints.

SCREENSHOT REFERENCE

30 unique screens • one screen per page • description immediately below the exact screenshot

30 • Admin • Control Center

Source image: 30_admin-control-center.png • original size: 1908 × 874 px • presented once in this manual

WHAT THIS PAGE IS

Admin landing/control center combining platform metrics, user operations, reports, configuration and system controls.

HOW TO USE IT

Use it as the administrator's command center for governance, monitoring and operational actions.

PROJECT / TECH MAPPING

Combines admin dashboard modules, platform analytics, AI configuration, notifications/reports and role-protected backend endpoints.

FINAL SUBMISSION CHECKLIST

Use this page immediately before demonstration, review or academic submission

1

Open the landing page and verify the Candidate / Recruiter / Admin entry paths.

2

Verify Candidate: resume upload/extraction/analysis → interview setup → live interview → report → analytics/history.

3

Verify Recruiter: candidate management → comparison → templates/jobs → analytics → reports.

4

Verify Admin: dashboard → user management → recruiter operations → platform performance → system health.

5

Verify AI services and ports when using the complete Docker Compose stack.

6

Do not package real API keys, SMTP passwords, cloud credentials or production secrets.

7

Keep the de-duplicated screenshot ZIP alongside the PDF for evidence review.

8

Use the project README, INSTALLATION.md, API_DOCUMENTATION.md and DEPLOYMENT.md for deeper implementation reference.

9

For a live demo, explain that the custom CNN is a genuine-model path and does not fabricate predictions when the model is absent.
